

The **Quantum Eye**[®] has an 18-month product life once it has been activated. Excessive dosages, multiple exposures or use after the expiration date may cause the sensor to permanently turn dark. If the sensor turns any color other than those shown, it has been contaminated and must be replaced.

NOTICE

Keep the sensor away from water, grease, solvents, dirt, hot surfaces, cleaning solutions, and other contaminants, which may destroy or shorten the life of the sensor.

Keep out of the reach of children.

INSTRUCTIONS

U.S. Patent 5,063,164
Patents Pending
Sensor Made in U.S.A.

Carbon Monoxide (CO) is an insidious and cumulative poison. It is a colorless, odorless and tasteless gas produced by the incomplete combustion of fuel

Figure 1. PPM.CO vs. Time (min.) = %COHb/Symptoms for Healthy Population (UL 2034 02_28_2008)

WARNING

This device is a PASSIVE warning detector. It does not sound an alarm and must be viewed to obtain indication of carbon monoxide conditions. It will not warn you while you sleep, watch TV, or otherwise cannot see the sensor. An Underwriters Laboratories listed CO alarm such as the COSTAR® products are recommended for adequate warning.

Table 1. PPM.CO vs. Time (min.) vs. Colors at 23±3°C and 50±20%RH:

PPM.CO	Normal	Caution	Danger
50	0-200	240 +	NA
100	0-20	25-55	60-90
200	0-9	10-22	23-35
400	0-3	4-9	10-15

INSTRUCTIONS:

1. Activate detector by removing it from the plastic bag.
2. Attach the detector in a location that is readily visible such as the kitchen refrigerator, immediate work area, or the instrument panel in your auto, plane or boat.
3. If carbon monoxide is present, the detector changes color, see Table 1.

Yellow = Normal

Green = Caution: Ventilate (Call for professional assistance.)

Dark Blue = Danger! Evacuate! (Call for help immediately.)

4. The detector returns to Normal in 2-8 hours when CO drops & remains < 10 ppm, and darkens again when CO level rises unless it has been expired, overexposed or contaminated.
